I. INTRODUCTION

A. Risk Factors

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- Invesco India Fixed Maturity Plan - Series 32 - Plan C is the name of the Scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss or shortfall resulting from the operations of the Scheme beyond the contribution of Rs. 1,50,000/- (Rupees One Lakh Fifty Thousand Only) made by them towards the corpus of the Mutual Fund.
- The present Scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors:

- **Risk associated with Fixed Income and Money Market Instruments:**

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However, in case of Government securities as credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

In case of floating rate instruments, an additional risk could arise because of changes in spreads of floating rate instruments. With increase in spread of floating rate instruments, the price can fall and

with decrease in spread of floating rate instruments, the prices can rise. Moreover, the floating rate instruments having a periodical interest rate reset carry lower interest rate risk compared to a fixed rate debt security. However, in the falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government securities, there is minimal credit risk to that extent.

Different types of securities in which the Scheme would invest carry different types and levels of risk. Lower rated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities.

Liquidity or Marketability Risk

This refers to the ease with which a security can be sold at or near to its valuation, i.e. yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between bid price and offer price quoted by a dealer.

Fixed income securities can be either listed on any stock exchange or may be unlisted. Moreover, the securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes and may lead to the Scheme incurring losses till the security is finally sold. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

While money market instruments are fairly liquid but lack a well-developed secondary market, which may restrict the ability of the Scheme to sell such instruments.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

- **Risks associated with Securities Lending**

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

- **Risks associated with Short Selling**

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions if the price increases substantially. If number of short sellers try to cover their position simultaneously, it may lead to

disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In additions, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

- **Risk Factors associated with Trading of Units on Stock Exchange(s)**
 - Although Units of the Scheme as mentioned in this Scheme Information Document are to be listed on the Exchange, there can be no assurance that an active secondary market will develop or be maintained.
 - The Units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of Scheme’s holdings. The trading prices of Units of the Scheme will fluctuate in accordance with changes in their NAV as well as demand and supply of the Units of the Scheme in the market.
 - Trading in Units of the Scheme on the Exchange may be halted because of market conditions or for reasons that in view of exchange authorities or SEBI, trading in Units of the Scheme is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI ‘circuit filter’ rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the Scheme will continue to be met or will remain unchanged.
 - The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Mutual Fund on the Maturity Date / Final Redemption Date will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.
 - As the Units allotted under Scheme will be listed on the Exchange, the Mutual Fund shall not provide for redemption / repurchase of Units prior to Maturity Date / Final Redemption Date of the Scheme.
- **Risk Factor associated with Close-ended scheme**

The Scheme is a close ended scheme and will not provide redemption facility prior to Maturity Date / Final Redemption Date. Therefore Units of the Scheme cannot be redeemed (including switch-outs) by the investors directly with the Mutual Fund until the Maturity Date/ Final Redemption Date. Unit holders who wish to sell the Units before the Maturity Date / Final Redemption Date can sell Units only on the Stock Exchange on which the Units of the Scheme are listed. Further Units of the Scheme will also be subject to risks associated with trading of Units on the Stock Exchange(s) viz. lack of active secondary market, Units may trade above or below their NAV, trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI ‘circuit filter’ rules etc.

Risk Mitigation Strategies:

Type of Risk	Measures to mitigate risk
Volatility	As the Scheme would follow passive investment strategy (i.e. buy and hold), the AMC do not foresee volatility risk in the portfolio.
Liquidity	The Scheme allows redemption of units only on maturity date/final redemption date. Investment will be made only in debt and money market instruments maturing on or before the maturity of the Scheme.
Concentration	As the total exposure to a single sector is restricted to 25% of net assets of the Scheme, the sectoral concentration risk is mitigated to a substantial extent. Further, to mitigate issuer concentration risk, the Scheme would have at least 9 issuers in case of debt instruments comprising money market instruments and non-money market instruments.

	<p>(Sectorial restriction of 25% is not applicable for investments made in Bank CDs, CBLO, G-Secs, T-Bills, short term deposits of scheduled commercial banks and AAA rated securities issued by Public Financial Institutions and Public Sector Banks).</p> <p>Further, as the total exposure of the Scheme in a Group (excluding investments in securities issued by Public Sector Units, Public Financial Institutions and Public Sector Banks) is restricted to 20% of net assets of the Scheme (such investment limit may be extended to 25% of the net assets of the Scheme with prior approval of the Board of Trustees), the concentration risk with respect to Group is also mitigated.</p>
--	--

B. Requirement of Minimum Investors in the Scheme

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme shall be wound up in accordance with Regulation 39(2)(c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 Business Days from the date of closure of the New Fund Offer.

D. WHERE WILL THE SCHEME INVEST?

The corpus of the Scheme will be invested in debt and money market instruments maturing on or before the date of maturity of the Scheme. Debt and money market instruments will include but not limited to:

1. Certificate of Deposits (CDs) is a negotiable money market instrument issued by scheduled commercial banks and select all-India Financial Institutions that have been permitted by the RBI to raise short term resources. The minimum denomination of CD should be Rs. 1 Lac and in multiples of Rs. 1 Lac thereafter. The maturity period of CDs issued by the Banks is between 7 days to one year, whereas, in case of FIs, maturity is between one year to 3 years from the date of issue. CDs may be issued at a discount to face value. Banks/ FIs cannot buy back their own CDs before maturity.
2. Commercial Paper (CPs) is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and all India Financial Institutions as an alternative source of short term borrowings. They are issued at a discount to the face value as may be determined by the issuer. CP is traded in secondary market and can be freely bought and sold before maturity.
3. Treasury Bills (T-Bills) are issued by the Government of India to meet their short term borrowing requirements. T-Bills are issued for maturities of 91 days, 182 days and 364 days. T-bills are issued at a discount to their face value and redeemed at par.
4. Cash Management Bills (CMB) are issued by Government of India to meet the temporary cash flow mismatches of the Government. CMBs are non-standard, discounted instruments issued for maturities less than 91 days. CMBs are issued at discount to the face value through auctions. The settlement of the auction will be on T+1 basis.

5. Collateralised Borrowing and Lending Obligations (CBLO) is a money market instrument that enables entities to borrow and lend against sovereign collateral security. It is in electronic form. The maturity ranges from 1 day to 90 days and can also be made available upto 1 year. Central Government securities including T-bills are eligible securities that can be used as collateral for borrowing through CBLO.
6. Securities created and issued by the Central and State Governments as may be permitted by RBI, securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills). Central Government securities are sovereign debt obligations of the Government of India with zero-risk of default and issued on its behalf by RBI. They form part of Government's annual borrowing programme and are used to fund the fiscal deficit along with other short term and long term requirements. Such securities could be fixed rate, fixed interest rate with put/call option, zero coupon bond, floating rate bonds, capital indexed bonds, fixed interest security with staggered maturity payment etc. State Government securities are issued by the respective State Government in co-ordination with the RBI.
7. Non-convertible debentures as well as bonds are securities issued by companies / institutions promoted / owned by the Central or State governments and statutory bodies, which may or may not carry a Central/State government guarantee, public and private sector banks, All India Financial Institutions, private sector companies. These instruments may be secured against the assets of the company or may be unsecured and are generally issued to meet the short term and long term fund requirements. Rate of interest on such instruments would depend upon spread over corresponding Government security, perceived risk, rating, tenor etc. These instruments include fixed interest security with/without put/call option, floating rate bonds, zero coupon bonds. Frequency of the interest payment could be either monthly/quarterly/half-yearly or annually.
8. Floating rate debt instruments are debt instruments issued by Central government, State government, corporates, PSUs etc. with coupon reset periodically. The periodicity of reset could be daily, monthly, quarterly, half yearly and annually or any other periodicity as may be mutually agreed between the issuer and the Fund. The fund manager will have the flexibility to invest the debt component into floating rate debt securities in order to reduce the impact of rising interest rate in the economy.
9. Repo (Repurchase Agreement) or Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds. When the seller sells the security with an agreement to repurchase it, it is Repo transaction whereas from the perspective of buyer who buys the security with an agreement to sell it at a later date, it is reverse repo transaction. Presently in India, G-Secs, State Government securities, T-Bills and corporate debt securities are eligible for Repo/Reverse Repo. However, the Scheme will not participate in repo in corporate debt securities.
10. Any other debt scheme of Invesco Mutual Fund or of any other mutual fund provided such investment is in conformity with the investment objective of the Scheme. Such investment will be subject to limits specified under SEBI (MF) Regulations and AMC will not be entitled to charge management fees on such investments.
11. Pending deployment of funds as per the investment objective of the Scheme, the funds may be parked in short term deposits of the Scheduled Commercial Banks, subject to guidelines and limits specified by SEBI.
12. Any other domestic debt securities as permitted by SEBI/RBI from time to time.

The securities / instruments mentioned above and such other securities that the Scheme is permitted to invest in will be rated and could be listed, unlisted, privately placed, secured, unsecured and maturing on or before the date of maturity of the Scheme. The securities may be acquired through initial public offering (IPOs), secondary market, private placement, rights offers, negotiated deals. Further investments in debentures, bonds and other fixed income securities will be in instruments which have been assigned investment grade rating by the credit rating agency.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are

banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates.

The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz., Government Securities Market or G-Sec Market and Corporate Debt Market. The latter is further classified as Market for PSU Bonds and Private Sector Bonds. The Government Securities (G-Secs) market, with market capitalization of Rs. 51,04,418 crores as on December 15, 2017 (Source: CCIL), is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The outstanding dated securities of the Government of India is Rs. 51,36,387 Crores as on April 9, 2018 (Source – RBI) as compared to Rs. 46,62,788 Crores as on March 31, 2017 (Source: CCIL). The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the government securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, Cash Management Bills etc. The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian debt market. However, recently there was a significant increase in corporate bond issuances, particularly since it is at a more attractive rate than bank financing. The total traded volume in corporate bonds during April 17 - February 18 (11MFY18) was Rs. 16,01,671 Crores vis-à-vis Rs. 14,70,662.51 Crores during Financial Year 2017 (Source: SEBI). A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

In money market, activity levels of the Government and non-government debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Collateralised Borrowing & Lending Obligations (CBLO)
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government Securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as money market instruments, PSU / PFI /Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The following table gives approximate yields prevailing on July 4, 2018 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy.

Instrument	Current Yield (% p.a.)
CBLO	5.94
Repo	6.25
91 Day T-Bill	6.49
182 Day T-Bill	6.90
364 Day T-Bill	7.14

180 days CD	7.52
365 days CD	8.12
GOI Securities (10 Years)	7.85
State Government (10 Years)	8.52

E. INVESTMENT STRATEGY

The investment objective of the Scheme would be achieved by investing in a portfolio of debt and money market instruments maturing on or before the date of maturity of the Scheme.

Under normal circumstances, passive portfolio management strategy would be adopted.

The fund manager will follow a strict disciplined investment process to meet the investment objective of the Scheme. The fund manager will carry out rigorous in depth credit evaluation of the money market and debt instruments proposed to be invested in. The credit evaluation includes a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term/ long term financial health of the issuer. Internal research and ratings issued by credit rating agencies will be used as the guide to credit quality.

Additional disclosure pursuant to SEBI circular dated August 1, 2011:

a) Credit Evaluation Policy:

Credit Evaluation Policy for investment in debt securities evaluates various factors which determine the repayment ability of the borrower/issuer. Investment team has two dedicated credit analysts for conducting the due-diligence and thorough analysis of each company. The due diligence process includes studying economic risk, industry risk, business risk, financial risk and management risk. For evaluating industry risk, some key factors pertinent across industries which are evaluated include size, historical growth, competitive scenario, demand/supply dynamics, entry barriers (if any), profitability, cyclicality, vulnerability to technological changes, regulatory environment & political environment etc. The credit analyst prepares a detailed research report based on the credit evaluation model which takes into account both qualitative and quantitative parameters. The research report includes a detailed analysis of the financial data of the previous 3 years and qualitative factors like the sector in which the company operates, the management track record, internal control systems, acceptability of the products of the company in the market, past track record of any defaults to their creditors etc. Further conference calls/meetings with the management of the company are arranged in order to seek further clarifications about the business and financial performance of the company and understand its strategies going forward. The financial analysis of the company is also compared against its peers to measure relative strengths and weaknesses. The report from the credit analyst is an independent opinion based on the credit risk analysis.

b) The Scheme shall not invest in debt securities issued by corporate operating in gem & jewellery.

c) Floors and ceilings within a range of 5% of the intended allocation against each sub asset class/credit rating will be as follows:

Instruments\ Credit Rating	AAA	A1+	AA *	A *	Not Applicable
Certificate of Deposits (CDs)	-	-	-	-	-
Commercial Papers (CPs)	-	-	-	-	-
Non-Convertible Debentures (NCDs)	95-100%	-	-	-	-
CBLO, G-Sec, T-Bills	-	-	-	-	0-5%

*Securities with rating A and AA shall include A+ and A- & AA+ and AA- respectively.

d) Positive variation in investment towards higher credit rating in the same instrument shall be allowed.

e) In case of non-availability of and taking into account the risk-reward analysis of CPs, NCDs, the Scheme may invest in highest (i.e. A1+) rated CDs, CBLO, Treasury Bills and Cash Management Bills, such deviations may exist till suitable NCDs, CPs of desired credit quality are not available.

f) At the time of building up the portfolio post NFO and towards the maturity of the Scheme, there may be a higher allocation to cash and cash equivalent and highest rated CDs.

g) Subsequent to the initial portfolio construction, during the tenure of the Scheme, the above allocation may vary due to instances like (i) Inflows on account of coupons or any corporate actions; (ii) the instrument is called or bought back by the issuer; (iii) in anticipation of any adverse credit event. In such cases, the Scheme as an alternate would

invest in CDs of highest credit ratings (A1+ or equivalent) / Treasury Bills / Cash Management Bills /CBLO/ till such time as suitable instruments of desired credit quality is/ are not available.

- h) All investment shall be made based on the rating prevalent at the time of investment. However, in case of an instrument having dual ratings, the most conservative publicly available rating would be considered.
- i) In the event of any deviations from the floor and ceiling of credit ratings specified for any instrument, the same shall be rebalanced within 30 days.

There will not be any variation between the intended portfolio allocation and the final portfolio allocation except the exceptions mentioned in d, e, f & i above.

- Fixed Income Securities (Debt Instruments): Fixed income securities or debt instruments are financial claims with promised cash flows of fixed amount paid at fixed dates. It is a contractual or written assurance to repay a debt. Fixed income securities/debt instruments include but not limited to Government securities, treasury bills, corporate bonds, debentures, commercial papers, floating rate notes, asset backed securities/mortgage backed securities, pass through certificates etc.
- Diversification: The Scheme will try to achieve diversification by having at least 9 issuers in case of debt instruments comprising of money market instruments and non-money market instruments. Further the total exposure of the Scheme in a Group (excluding investments in securities issued by Public Sector Units, Public Financial Institutions and Public Sector Banks) is restricted to 20% of net assets of the Scheme. Such investment limit may be extended to 25% of the net assets of the Scheme with prior approval of the Board of Trustees.
- Security selection criteria: The process of security selection would go through following criteria:
 - Investment objective and asset allocation mandate of the scheme as specified in the Scheme Information Document.
 - Credit quality of the security, judged by using internal research and rating assigned by the credit rating agency.
 - Liquidity of the asset in the secondary market (based on historical traded volumes in secondary market).
 - Impact of the security on the portfolio duration/residual maturity and yield.

Risk Control

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to VAR etc. Further AMC has implemented Bloomberg Asset and Investment Manager System as Front Office System (FOS) for managing risk. The system has inbuilt feature which enables the fund manager to calculate various risk ratios, average duration and analyze the same.

PORTFOLIO TURNOVER

The Scheme being a close ended debt Scheme, there would not be subscriptions and redemptions on a daily basis. Under normal circumstances, the fund manager will follow passive portfolio management strategy. In view of the nature of the Scheme, there is likely to be no turnover in the portfolio of the Plan(s) (except for change in composition of portfolio of securities made as per the prevailing market conditions like changes in interest rate policy announced by RBI, shifts in the yield curve, credit rating changes etc.). However, it is difficult to measure with reasonable accuracy, the likely turnover in the portfolio of the Scheme.

In addition the AMC may purchase Units of the Scheme directly from the Stock Exchange(s) after the Units are listed on the Stock Exchange, subject to the SEBI (MF) Regulations. D. Computation of NAV

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the principles of fair valuation as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Direct Sub-Plan under the Scheme will have separate NAV. Further, separate NAV will be calculated and disclosed for each option. The NAVs of the Growth option and the Dividend option will be different after the declaration of the first dividend.

IV. FEES AND EXPENSES

This section outlines the expenses that will be charged to the Scheme.
