Presenting Invesco India Equity Savings Fund

Traditional investments may offer safety - but sticking to them out of habit may not be right thing to do, especially since your needs are growing day by day.

On the other hand, fear of losing money prevents you from even considering newer investment options.

Presenting a solution designed to help you make the shift from the same old investments to a more suitable alternative.

Invesco India Equity Savings Fund invests in a combination of equity, arbitrage and fixed income resulting in a portfolio which is less volatile and offers income with potential for growth through controlled equity exposure.

Three-pronged investment strategy :

Offers a controlled exposure to equity, combined with investments in fixed income and arbitrage for income generation.

Key features

Growth potential of equities

The net long equity exposure may help reap benefit of long term growth potential of equity.

Arbitrage opportunity

Each arbitrage position in equity has a corresponding exposure in stock future which helps in reducing risk.

Fixed Income exposure

The exposure to fixed income aims to reduce volatility and generates stable income.

Taxation treatment

Maintains eligibility for equity taxation.

Investment Process

Asset Allocation

Consistent with the Investment Objective

Equity exposure to be maintained in the range of 65-80%

20-35% allocation in debt and money market instruments

Shifts based on assessment of opportunities available & risk/return of the asset class. Based on our views, macro developments, yields and liquidity considerations

Security Selection

Bottom up and top down approach, combining growth and value buys to generate consistent outcome through all market conditions

Fund utilizes all the portfolio construction levers (asset allocation, sector allocation, capitalization bias, stock selection) to create a diversified portfolio of stocks

Alpha from stock selection and sector allocation

Debt security selection based on top down approach, interest rate view, yield curve movements

Portfolio construction & risk management

No style bias

Flexibility to have off benchmark exposure

Tactical allocation to take advantage of opportunities arising due to price differential between cash and derivatives market

Position sizes are based on risk/reward assessment

Risk management based on internal parameters for respective asset class.

*Based on our current view on equity market. The number of stocks may change from time to time.

Scenario Analysis – Hybrid strategy performance across various market returns framework

How to read the table?

Lets take an example of first cell from left highlighted in blue- Arbitrage & Debt: 5% return x 60% exposure = 3.00% contribution; Equity: 8% return x 40% exposure = 3.20% contribution. So performance of the Hybrid Strategy = 3% + 3.2% = 6.20% return. Highlighted cells indicate probable return scenario.

Past performance may or may not be sustained in future.

Disclaimer: The purpose of above table is to explain various returns scenarios over a period of 1 year with 40% exposure to equity & 60% exposure to debt and / or arbitrage (as both have similar returns profile) assuming different rate of returns for each exposure over the same time period. The above simulation is for illustration purpose only and should not be construed as a promise on minimum returns or safeguard of capital. Invesco Asset Management (India) Private Limited/Invesco Mutual Fund is not guaranteeing or promising or forecasting any returns.
